

# GitHub + VS Code Connection Notes

Step-by-step guide to connect a local project folder with your GitHub repository using Git Bash and VS Code.

## Step 1 — Open Project Folder

Open your project folder in File Explorer → Right click → Open Git Bash Here

## Step 2 — Check Current Folder

Command:

```
pwd
```

## Step 3 — Initialize Git

Command:

```
git init
```

## Step 4 — Remove Old Remote Repository

Command:

```
git remote remove origin
```

## Step 5 — Connect Your GitHub Repository

Command:

```
git remote add origin https://github.com/vishnu-pratap-singh/Upflairs-DS-Batch.git
```

## Step 6 — Verify Remote Connection

Command:

```
git remote -v
```

## Step 7 — Pull Existing GitHub Files

Command:

```
git branch --set-upstream-to=origin/main main  
git pull origin main --allow-unrelated-histories
```

## Step 8 — Add Project Files

Command:

```
git add .
```

## Step 9 — Commit Files

Command:

```
git commit -m "Upload project"
```

## Step 10 — Push to GitHub

Command:

```
git push origin main
```

## Common Errors & Fixes

| Error                               | Fix                                   |
|-------------------------------------|---------------------------------------|
| remote origin already exists        | Use: git remote remove origin         |
| No such remote 'origin'             | Use: git remote add origin <repo-url> |
| src refspec main does not match any | Create commit first using git commit  |
| Authentication failed               | Use GitHub Personal Access Token      |
